

**DATA INTEGRATIONS**

**Easily Integrate Our Data with Most Geospatial Data Platforms**

If you already use an existing asset management platform, RoadBotics by Michelin will work with you to provide our geospatial data in a shapefile that can be easily integrated into most GIS-enabled platforms. This data is key to filling the void of pavement condition data and can simplify the pavement management planning process.

**Some of the platforms we successfully integrate with include:**

**Esri ArcGIS**

Mapping and location-based analytics platform created by Esri

**CSDatum**

Web-based mapping application developed by CS Davidson

**ManageMyRoads**

Esri-based asset management software from RoadBotics by Michelin's Enterprise Partner BETA Group, Inc.

**Traisr**

Web-based GIS platform that allows users to manage any type of asset from RoadBotics by Michelin's Enterprise Partner McMahon Associates.

Don't see your existing platform management program on this list? Our team is ready to discuss custom integration options with you.
